Instruction card for downloading open data from GeoServer

Pilleri, V., Kaarto, E., Lehtonen, P. & Muukkonen, P.

petteri.muukkonen@helsinki.fi

GeoServer is an open source and free computer server that allows users to share and modify geographic data.

Data formats:

- KML,
- GML,
- Shapefile,
- GeoRSS,
- PDF,
- GeoJSON, J
- PEG,
- GIF, SVG, PNG

Type of data:

- population
- map by province,
- satellite photos

1) Follow the following link : <http://geo.stat.fi/geoserver/web/>.

You are now connected to the server belonging to Tilastokeskus (Statistics Finland). On the left you will find several tabs, click on the tab: "layer preview"

2) Choose the layer download format

Type	Title	Name	Common Formats	All Formats
	Tuotanto- ja teollisuuslaitokset 2018	ttlaitokset:toimipaikat	OpenLayers KML GML	Select one
	Oppilaitokset 2019	oppilaitokset:oppilaitokset	OpenLayers KML GML	Select one
	Väestö 2011 vuoden 2013 AVI-aluejaolla	vaestoalue:avi_vaki2011	OpenLayers KML GML	Select one
	Väestö 2012 vuoden 2013 AVI-aluejaolla	vaestoalue:avi_vaki2012	OpenLayers KML GML	Select one

You can see all layers of Statistic Finland. Go to the tab "all formats", click on the tab "choose a layer" and choose the format that you want.

3) Download the map

If you have chosen, the following layer : Seutukunnat 2014 (1:1 000 000) , the map on the left will open in a new window. Double click on the map and save it as a download.
