Virtual hospital and health village

Drag the words to the correct boxes.

The idea behind Health Village was to find a way to offer better healthcare services for citizens. This is achieved by increasing *the availability* of health services for all citizens regardless of their location and *income level* meaning that its services are available *free-of-charge*. This helps to increase *the equality* of citizens.

Health village integrates digital services and patients' treatment by incorporating *digital care pathways* that allow patient *to interact* with healthcare professionals. They are classified into three groups: 1) prepare for treatment and follow up, 2) coaching and web therapy as well as 3) *managing chronic diseases*. Their usage usually requires a *care relationship* between patient and *specialist care unit*.

Health Village also includes content for targeted for *healthcare professionals* that can be accessed using professional ID card. The content includes *harmonized national practices * and services helps communicating them from hospital level throughout the country.
