

Moodle H5P Fill in the blanks

eHealth deployment in Finland

Fill in the missing words or numbers

Public sector covers about **75** % of the Finnish health care services. Patients pay a small **fee** for health care visits. Currently there are **21** hospital districts in Finland. In 2023 hospital districts will be transferred to 21 **wellbeing service counties**. Private sector and **occupational** health care provide supplementary services (**25** % of expenditure). Centralized statistics are collected via various **registers**.

Electronic Patient Records were implemented in all health care services in Finland by **2010**. When comparing hospitals and health centers, **hospitals** have typically been forerunners in the progress of availability of the electrical services. Citizens were ready for e-services already in late **2000**'s. Availability of remote consultations increased already **before** start of COVID-19 pandemic. The use of Finnish **Health Information Exchange** Kanta services increased **after** start of COVID-19 pandemic. In international EU-comparisons e.g. Nordic countries have been **forerunners** in eHealth use. In Finland almost **50** % of people have used eHealth services.
