Moodle H5P Drag and Drop

Drag the words to the correct boxes.

Telerehabilitation is one of the fields of *telehealth*. It can be used for example in *physiotherapy* and occupational therapy. It utilizes technologies that are for instance *image:in alphabetical order* or *sensor* based, as well as virtual environments and virtual *reality*. Telerehabilitation classes aim to provide *home-based* rehabilitation services at the same time reducing the patient's need to *travel*. To achieve successful telerehabilitation it is important to select *suitable* participants, ensure the availability of *equipment* and efficient enough *internet connection*, and secure adequate support of *home care nurses*.
